All,

The cask with the 10 sister rods is in the PNNL facility. Thanks to ORNL and especially Bruce for getting things done on your end.

Can we set up a phone call this week to discuss Rose's email regarding the NDAs? The only NDAs I have in place with AREVA/Framatome and Westinghouse discuss the as-fabricated data. I am unaware of any requirement for the fuel vendors to review and/or approve data generated under this program. So we need to discuss.

Similarly, I was just informed that this material has a "Foreign Obligation" associated with it because apparently the uranium originated from Australia. I have no idea what that even means.

Again, please let me know of a date and time – preferably Thursday or Friday this week, that we can have a call so we can all understand and be on the same page.

Thanks,

Brady D. Hanson, Ph.D.
