6. SPACE Software Routine Limits and Execution Instructions

The following listing describes the SPACE software routine limitations.

- 1) The maximum number of irradiation steps allowed in a given SPACE generated CRAFT calculation file is 23.
- 2) The maximum number of concentric zones allowed in a SAS2H Path B model is 15.
- 3) The maximum number of axial nodes allowed in any axial format is 50.
- 4) The maximum number of reactor cycles in which an assembly may be inserted is 10.
- 5) The maximum number of CRC statepoints allowed in a single reactor cycle (BOC counts as one statepoint) is 20.
- 6) The maximum number of different CRB or GDR absorber material mixtures allowed is 25.
- 7) The maximum number of CRB design description specifications allowed is 10.

The procedure for performing a fuel assembly depletion calculation with SPACE consists of the following steps:

- 1) Create a SPACE input file for the assembly depletion calculation.
- 2) Assure that the following files are available in the assembly calculation directory:

SPACE executable file
SPACE input file entitled "spacein"
LIFTOFF script file
CRAFT executable file
BATCH43 script file
SEDEXECUTE script file

The LIFTOFF script file executes CRAFT through all of the required nodal calculations for a BWR assembly. The ASCII listing of the LIFTOFF script file is shown in Table 6-1. The BATCH43 executable file is a script file which is used by CRAFT to execute the SCALE code system. An ASCII listing of the BATCH43 script is shown in Table 6-2. The SEDEXECUTE executable file is a script file which is used in conjunction with the CRAFT software routine to create the consolidated output files described in Section 8. A listing of the "sedexecute" script is shown in Table 6-3. Assure that the "sed" line editor is loaded onto the computer system and is in the command path (i.e., executable from the command line through the issuance of the "sed" command).

- 3) Execute SPACE.

Table 6-1. Listing of the "LIFTOFF" Script Required for the Execution of CRAFT

```

for k in 02 03 04 05 06 07 08 09
do
  cp /local/davidh/CRAFT_V4/hold .
  cp ${k} datain
  craftv4c.exe
  rm hold
  echo "*****completed craft run" "${k}"
  date
  mv ${k} "${k}"".""B"
  for ext in input output msgs notes cut
  do
    for filename in `ls *.$ext`
    do
      beg=`expr substr $filename 1 7`
      mid=`expr substr $filename 8 2`
      end=`expr substr $filename 10 16`
      if [ "$mid" = "01" ]
      then
        if [ -f "$beg""$k""$end"".""$ext" ]
        then
          echo "Error in renaming $mid to $k"
          exit
        else
          mv "$filename" "$beg""$k""$end"".""$ext"
        fi
      fi
    done
  done
done
for k in 10
do
  cp /local/davidh/CRAFT_V4/hold .
  cp ${k} datain
  craftv4c.exe
  rm hold
  echo "*****completed craft run" "${k}"
  date
  for ext in input output msgs notes cut
  do

cp 01 datain

```

Title: CRC Depletion Calculations for Quad Cities Unit 2

Document Identifier: B00000000-01717-0210-00009 REV 01

Attachment II, Page II-42 of 82

```
craftv4c.exe
rm hold
echo "*****completed craft run ""01"
echo "*****end liftoff"
date
```

The structure of the LIFTOFF.EXE script shown in Table 6-1 is only understandable if examined in the context in which it is executed by the SPACE software routine to control operation of CRAFT software routine.

Table 6-2. Listing of the BATCH43 Script Required for the Execution of SAS2H

```
#!/bin/csh
if ( ! ( $?SCALE ) ) setenv SCALE /opt/neut/Scale4.3
setenv CMDS $SCALE/cmds
set pid=`$CMDS/ppid`
# Set the TMPDIR to a scratch directory for SAS2H
setenv TMPDIR /local/davidh/scale4.3/tmp
if ( -e $1 ) then
  set input=$1
  set output=$1:r.output
  set msgs=$1:r.msgs
else if ( -e $1.inp ) then
  set input=$1.inp
  set output=$1.out
  set msgs=$1.msg
else if ( -e $1.input ) then
  set input=$1.input
  set output=$1.output
  set msgs=$1.msgs
else
  echo ++++++
  echo "the input file you specified does not exist"
  echo ++++++
  exit
endif
$CMDS/scale43 $input $output >& $msgs
rm -r $TMPDIR
```

The structure of the BATCH43 script shown in Table 6-2 is only understandable if examined in the context in which it is used in the CRAFT software routine.

print ' ' >> $1.cut
```

The structure of the SEDEXECUTE script shown in Table 6-3 is only understandable if examined in the context in which it is used in the CUTTER subroutine of the CRAFT software routine. The SED command issued in the SEDEXECUTE script initiates the execution of the SED line editor.

7. Detailed Descriptions of SPACE Input File Groups

<u>Input Group Number</u>	<u>Detailed Description</u>
1	: This line turns on a flag that requests CRAFT to be executed. If the user does not wish to run the SPACE-CRAFT-SAS2H sequence but would like to generate the CRAFT input files for review prior to executing the run, the character "N" should be placed in column 1 of this line. If the user wishes to run CRAFT, then the character "Y" should be placed in the first column of this line.
2	: This line should contain a 21 character assembly identifier which will be placed on all CRAFT and SAS2H input files and echoed throughout the SAS2H output. The assembly identifier must be placed in columns 1 through 21 of this line. An example of a problem identifier would be "D9 – no CRB tracking".
3	: This line should contain a 3 character prefix which will be used as the initial 3 characters of each file generated in the SPACE-CRAFT-SAS2H calculation. The prefix must be placed in columns 1 through 3 of this line. An example of a prefix for use would be "QC2".
4	: This line should contain the identifier for the SCALE cross section library which is to be used in all of the SAS2H calculations. Available SCALE cross section libraries include the following: <ol style="list-style-type: none">1) 44GROUPNDF5 or 44group;2) 27BURNUPLIB;3) 27GROUPNDF4;4) 238GROUPNDF5;5) HANSEN-ROACH. The 44group cross-section library is recommended for use in all SPACE calculations relevant to Commercial Reactor Critical evaluations.
5	: This line should contain the number of nodal average fuel

Document Identifier: B00000000-01717-0210-00009 REV 01

Attachment II, Page II-45 of 82

<u>Input Group Number</u>	<u>Detailed Description</u>
	enrichments in U-235 wt% required to adequately describe the assembly.
5A	: For the number of nodal average fuel enrichments specified in input group 5, this line should be repeated and should contain the value for the average nodal U-235 wt%.
6	: This line should contain the number of GDRs per different node specification required to adequately describe the assembly.
6A	: For the number of GDRs per different node specifications required in input group 6, this line should be repeated and should contain the number of GDRs required per node specifications.
7	: This line should contain the number of additional GDR or CRB mixtures required to adequately describe the assembly.
8	: This line should contain the number of Path B models required to adequately describe the assembly.
8A	: For the number of different Path B models specified in input group 8, this line should be repeated sufficient times and should contain the mass of uranium in the node in the units of grams.
8B	: For the number of different Path B models specified in input group 8, this line should be repeated sufficient times and should contain the total number of fuel rods in the node.
9	: This line should contain the fuel rod pitch in the node in units of cm.
10	: This line should contain the smeared fuel pellet diameter (nominal fuel rod cladding inner diameter) in units of cm.
11	: This line should contain nominal fuel rod cladding inner diameter in units of cm.
12	: This line should contain nominal fuel rod cladding outer diameter in units of cm.
13	: This line should specify the reference moderator density in units of grams per cubic centimeter. This density value represents the moderator density for regions of solid water in the assembly

Attachment II, Page II-46 of 82

**Input Group
Number**

Detailed Description

model, i.e. bypass moderator region or bottom of assembly (sub-cooled region). Additionally, this value is used with appropriate in-channel moderator density factors to generate in-channel moderator densities for each node of an assembly.

14 : This line should be repeated the same number of times as listed in input group 8 and should contain the number of radial zones required for the Path B model.

14A : For the number of radial zones indicated in input group 14 for each Path B model, this line should contain the SAS2H mixture number and the radius of the Path B model zone; this configuration of mixture number and radial zone must be repeated for each Path B model to specify the same model when a CRB would be present, i.e., borated moderator placed in the bypass moderator radial zone instead of pure moderator. For example, Path B model #1 would actually have two models specified using the format provided in lines 14 and 14A. The first model would describe the Path B without borated moderator (CRB). The second Path B model would be identical except for a borated moderator material being specified in the bypass region of the node. When the node requires the insertion of a CRB, the SPACE software routine will automatically pick the second model in each Path B description to describe the "bladed node". Lines 14 and 14A are repeated sufficient times to adequately describe the Path B models for the individual nodes in the assembly.

15 : This line should contain the number of reactor cycles that the assembly is inserted.

Input groups 16 through 24 represent an input grouping that must be specified recursively for the reactor cycle in which the fuel assembly is inserted as denoted on line 15. This means that input groups 16 through 24 would be input for the first reactor cycle, and then input again for the second reactor cycle, and so on until all of the reactor cycles have been specified.

16 : This line should contain a 2 character reactor cycle identifier that will be used to identify the cycle on appropriate SAS2H input

Attachment II, Page II-47 of 82

**Input Group
Number**

Detailed Description

files generated by the SPACE calculation. For example, if the first reactor cycle were identified as "Cycle-1A", the value of this input line should be "1A". If a reactor cycle were identified as "Cycle-1", the value of this input line should be "01", etc...

- 17 : This line should contain an integer value specifying the number of CRC statepoints in the reactor cycle specified in input group number 16. The BOC is always considered statepoint 1 in a CRC evaluation.

Input groups 18 through 20 represent an input grouping that must be specified recursively for each CRC statepoint in the reactor cycle as specified on line 17. This means that input groups 18 through 20 would be input for the first statepoint, and then input again for the second statepoint, and so on, until all of the statepoints in the reactor cycle have been specified.

- 18 : This line should contain a value specifying the EFPD for the statepoint. If the first statepoint in a reactor cycle (BOC) is being described, the value of this line should be 0.
- 19 : This line should contain a value specifying the length in calendar days from the BOC to the CRC statepoint. If the first statepoint in a reactor cycle (BOC) is being described, the value of this line should be 0.
- 20 : This line should contain a value specifying the downtime in calendar days for the reactor shutdown at the CRC statepoint. If the first statepoint in a reactor cycle (BOC) is being described, the value of this line should be 0.
- 21 : This line should contain a value specifying the downtime in calendar days at the EOC reactor shutdown.
- 22 : This line should contain a value specifying the total EFPD for the reactor cycle from the BOC startup to the EOC shutdown.
- 23 : This line should contain a value specifying the total cycle length in calendar days from the BOC startup to the EOC shutdown.
- 24 : This line should contain an integer value less than 100 that specifies the sequential assembly insertion number. For example, the first cycle that an assembly is inserted would be 1,

Input Group
Number

Detailed Description

the second cycle 2, etc.

Input groups 25 through 28 represent an input grouping that must be specified recursively for the SAS2H calculations commencing from each statepoint in the relative reactor cycle specified on input group 25. This means that input groups 25 through 28 would be input for the first statepoint calculation (BOC to statepoint 2) in the reactor cycle, and then input again for the second statepoint calculation (perhaps statepoint 2 to statepoint 3) in the reactor cycle, etc., until all of the statepoint calculations in the reactor have been described.

- 25 : This line should contain the relative cycle number for which the following irradiation step data applies.
- 26 : This line should contain the relative statepoint number for which the moderator density data applies.
- 27 : This line should contain the number of irradiation steps required in the statepoint calculation.
- 28 : This line should contain a value specifying the irradiation step length in EFPD for the SAS2H statepoint calculation for which input data is being provided.
- 29 : This line should contain an integer value corresponding to the number of axial nodes utilized in the CRC evaluation.
- 30 : This line contains two integer values delimited by spaces. The first value specifies an axial node number in the CRC axial format. The second value specifies the corresponding node height in units of cm. This line must be repeated a number of times equal to that specified in input group 29. The repetition of this line should be performed such that the CRC axial node data is provided in sequential order (i.e., node 1 through node N, where N is the final node). Node 1 should always be specified as the bottom node of the fuel assembly.
- 31 : The character "N" should always be in the first column of this line. The obsolete RESTART function is not used.
- 32 : For each specified node in the assembly, seven integer values selecting the Path B model configuration are required on this line; the integer values determine: enrichment # for specified

**Input Group
Number**

Detailed Description

- node from input group 5A; uranium mass # for specified node from input group 8A; Path B model # for specified node from input group 14; gadolinia mixture # for specified node from input group; GDR volume # in specified node from input group 6A; borated moderator mixture # for specified node from input group 35; and moderator mixture # for specified node from input group 35.
- 33 : The RESTART Path B model number should be specified by this input group. This input is obsolete.
- 34 : This line should contain the number of previously defined irradiation steps in which the assembly contains a CRB.

Input groups 34A through 34B represent an input grouping that must be specified recursively for irradiation step that has a CRB present as denoted on input group 34. This means that input groups 34A through 34B would be input for the irradiation step containing a CRB and then input again for the second irradiation step containing a CRB, etc., until all of the irradiation steps containing a CRB specified on input line 34 have been described.

- 34A. : For each defined irradiation step containing a CRB for the assembly, this line should specify the number of axial assembly sections containing a CRB for the specified irradiation step.
- 34B : For each defined irradiation step containing a CRB, this line should contain six integers that describe the CRB insertion in the assembly; these six values are relative cycle number containing the CRB, relative statepoint in cycle (BOC=stpt 1), relative irradiation step number, bottom node number containing CRB, top node number containing CRB, and CRB absorber material mixture number.
- 35 : Depending upon number of additional mixtures required as specified in input group 7, values for the number of isotopes in the GDR or CRB absorber material mixture, SAS2H material mixture identifier for the GDR or CRB absorber material mixture, and density for GDR or CRB material mixture should be specified on this line; (note: the first three materials specified in this format should always be GDR absorber materials and the remaining material specifications should describe the models

Input Group
Number

Detailed Description

		without and with CRBs)
35A	:	For each SAS2H material specified in input group 35, this line should contain the SCALE nuclide identifier for the GDR or CRB absorber material mixture and the wt% for the nuclide in the mixture. The ordering of GDR isotopes is important and should follow the listed format:
		92234 0.0000
		92235 0.0000
		92236 0.0000
		92238 0.0000
		64152 0.0000
		64154 0.0000
		64155 0.0000
		64156 0.0000
		64157 0.0000
		64158 0.0000
		64160 0.0000
		8016 0.0000

Input groups 36 through 38 represent an input grouping that must be specified recursively for each statepoint calculation to be generated by the SAS2H calculation. This means that input groups 36 through 38 would be input for the first statepoint calculation (BOC to statepoint 2 of relative cycle number 1), and then input again for the second statepoint calculation, etc., until all of the statepoint calculations to be generated by SAS2H have been addressed (the final statepoint calculation would be that ending at the final statepoint in the last relative cycle).

36	:	This line should contain an integer value specifying the number of axial nodes in the axial format in which the current fuel rod cladding temperature input data is being provided.
37	:	This line should contain two values delimited by spaces. The first value should be the appropriate node number in the fuel rod cladding temperature axial format for the statepoint calculation for which input is being provided. The second value should be the node height corresponding to the axial node number identified by the first value. This input line specification should be repeated the number of times identified in input group 36.
38	:	This line should contain the fuel rod cladding temperature value

**Input Group
Number**

Detailed Description

in units of degrees Kelvin for the appropriate node. This data should correspond to the statepoint calculation for which input data is being provided. This input line specification should be repeated the number of times identified in input group 36.

Input groups 39 through 41 represent an input grouping that must be specified recursively for each statepoint calculation to be generated by the SAS2H calculation. This means that input groups 39 through 41 would be input for the first statepoint calculation (BOC to statepoint 2 of relative cycle number 1), and then input again for the second statepoint calculation, etc., until all of the statepoint calculations to be generated by SAS2H have been addressed (the final statepoint calculation would be that ending at the final statepoint in the last relative cycle).

- 39 : This line should contain an integer value specifying the number of axial nodes in the axial format in which moderator temperature input data is being provided.
- 40 : This line should contain two values delimited by spaces. The first value should be the appropriate node number in moderator temperature axial format for the statepoint calculation for which input is being provided. The second value should be the node height corresponding to the axial node number identified by the first value. This input line specification should be repeated the number of times identified in input group 39.
- 41 : This line should contain the moderator temperature value in units of degrees Kelvin for the appropriate node. This data should correspond to the statepoint calculation for which input data is being provided. This input line specification should be repeated the number of times identified in input group 39.

Input groups 42 through 45 represent an input grouping that must be specified recursively for each statepoint calculation to be generated by the SAS2H calculation. This means that input groups 42 through 45 would be input for the first statepoint calculation (BOC to statepoint 2 of relative cycle number 1), and then input again for the second statepoint calculation, etc., until all of the statepoint calculations to be generated by SAS2H have been addressed (the final statepoint calculation would be that ending at the final statepoint in the last relative cycle).

Attachment II, Page II-54 of 82

8. SPACE Output Description

The SPACE software routine generates CRAFT calculation input files for various types of CRAFT calculations. The CRAFT input files generated by SPACE are named with a two digit integer identical to the node number that is being processed in the CRAFT-SAS2H calculation. The CRAFT input filenames for these file types would be as follows:

GDR and Uranium Blanket CRAFT input files:

01, 02, 03, 04, 05, 06, 07, 08, 09, 10

When a CRAFT execution for a node is complete the CRAFT input file for the node is renamed with the "*.B" extension.

In Attachment III, all SPACE and CRAFT input files are renamed and stored to a writable compact disk (WCD). The naming method for all SPACE and CRAFT input files that are stored on the WCD is demonstrated below.

CRAFT Input Files: Naming Format: "MMANN" Example: "05J12"

where:

MM - node number

A - letter designation of the assembly type

NN - assembly number

SPACE Input Files: Naming Format: "SPANN" Example: "spJ12"

where:

SP - designation for SPACE input file

A - letter designation of the assembly type

NN - the assembly number

Attachment III, Page III-1 of 29

This attachment contains the SPACE and CRAFT input decks for the depletion calculations for Quad Cities Unit 2. The input decks are contained on an attachment CD of this calculation file. The information contained in this hard-copy representation of Attachment III is a listing of the various SPACE and CRAFT input deck files and their attributes. The file sizes listed in the following table are the file sizes as they appear on the Hewlett Packard (HP) Series 9000 workstation. The HP file sizes differ from the file sizes on the attachment CD due to the difference in the block sizes between the HP and the personal computer. The CD containing Attachment III was written using the HP CD-Writer Plus 7200e External CD-ReWritable Drive for personal computers.

Title: CRC Depletion Calculations for Quad Cities Unit 2

Document Identifier: B00000000-01717-0210-00009 REV 01

Attachment IV, Page IV-1 of 163

This attachment contains the consolidated SAS2H output files that were generated by CRAFT during the depletion calculations for Quad Cities Unit 2. These files are referred to as “*.cut” files due to their “.cut” extension. The “*.cut” files are contained on an attachment CD of this calculation file. The information contained in this hard-copy representation of Attachment IV is a listing of the various “*.cut” files and their attributes. The file sizes listed in the following table are the file sizes as they appear on the Hewlett Packard (HP) Series 9000 workstation. The HP file sizes differ from the file sizes on the attachment CD due to the difference in the block sizes between the HP and the personal computer. The CD containing Attachment IV was written using the HP CD-Writer Plus 7200e External CD-ReWritable Drive for personal computers. Four separate CDs were required to hold all of the files for Attachment IV. The CD numbers and corresponding file numbers are listed below.

- Attachment IV – CD #1: aI.Vf1 - aIVf3.049
- Attachment IV – CD #2: aIVf3.050 – aIVf6.377
- Attachment IV – CD #3: aIVf6.378 – aIVf9.999, aIVf10.334 – aIVf10.430
- Attachment IV – CD #4: aIVf10.000 – aIVf10.333, aIVf10.431 – aIVf11.070

Calculation Attachment

Title: CRC Depletion Calculations for Quad Cities Unit 2

Document Identifier: B00000000-01717-0210-00009 REV 01

Attachment IV, Page IV-44 of 163

Table with 5 columns: Computer (e.g., c1110/QC2A04N01DC13T010AC13T112.cut), Tape Backup (e.g., aIVf2.952), File Date (e.g., Jun 7 1999), File Size (e.g., 147811), File Type (e.g., ASCII). The table lists numerous entries for various computer files and their corresponding tape backup details.

Title: CRC Depletion Calculations for Quad Cities Unit 2

Document Identifier: B00000000-01717-0210-00009 REV 01

Attachment V, Page V-1 of 146

This attachment contains the "*.notes" files that were generated by CRAFT during the depletion calculations for Quad Cities Unit 2. These files are referred to as "*.notes" files due to their ".notes" extension. The "*.notes" files are contained on an attachment CD of this calculation file. The information contained in this hard-copy representation of Attachment V is a listing of the various "*.notes" files and their attributes. The file sizes listed in the following table are the file sizes as they appear on the Hewlett Packard (HP) Series 9000 workstation. The HP file sizes differ from the file sizes on the attachment CD due to the difference in the block sizes between the HP and the personal computer. The CD containing Attachment V was written using the HP CD-Writer Plus 7200e External CD-ReWritable Drive for personal computers.
